

VOLCANOES

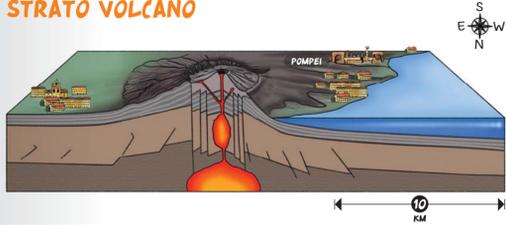

VOLCANO SHAPES:

Different types of volcanoes have various shapes due to the eruption type and the nature of magma they erupt.

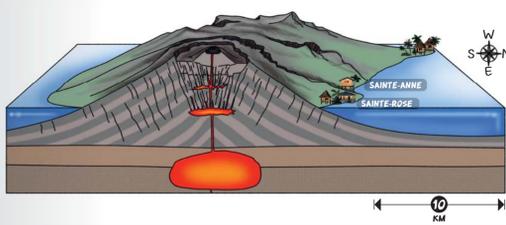

Etna
STRATO VOLCANO

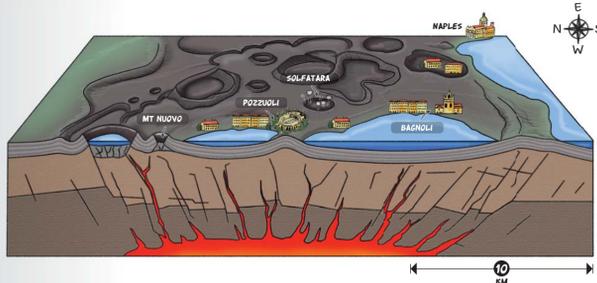

Vesuvius
STRATO VOLCANO

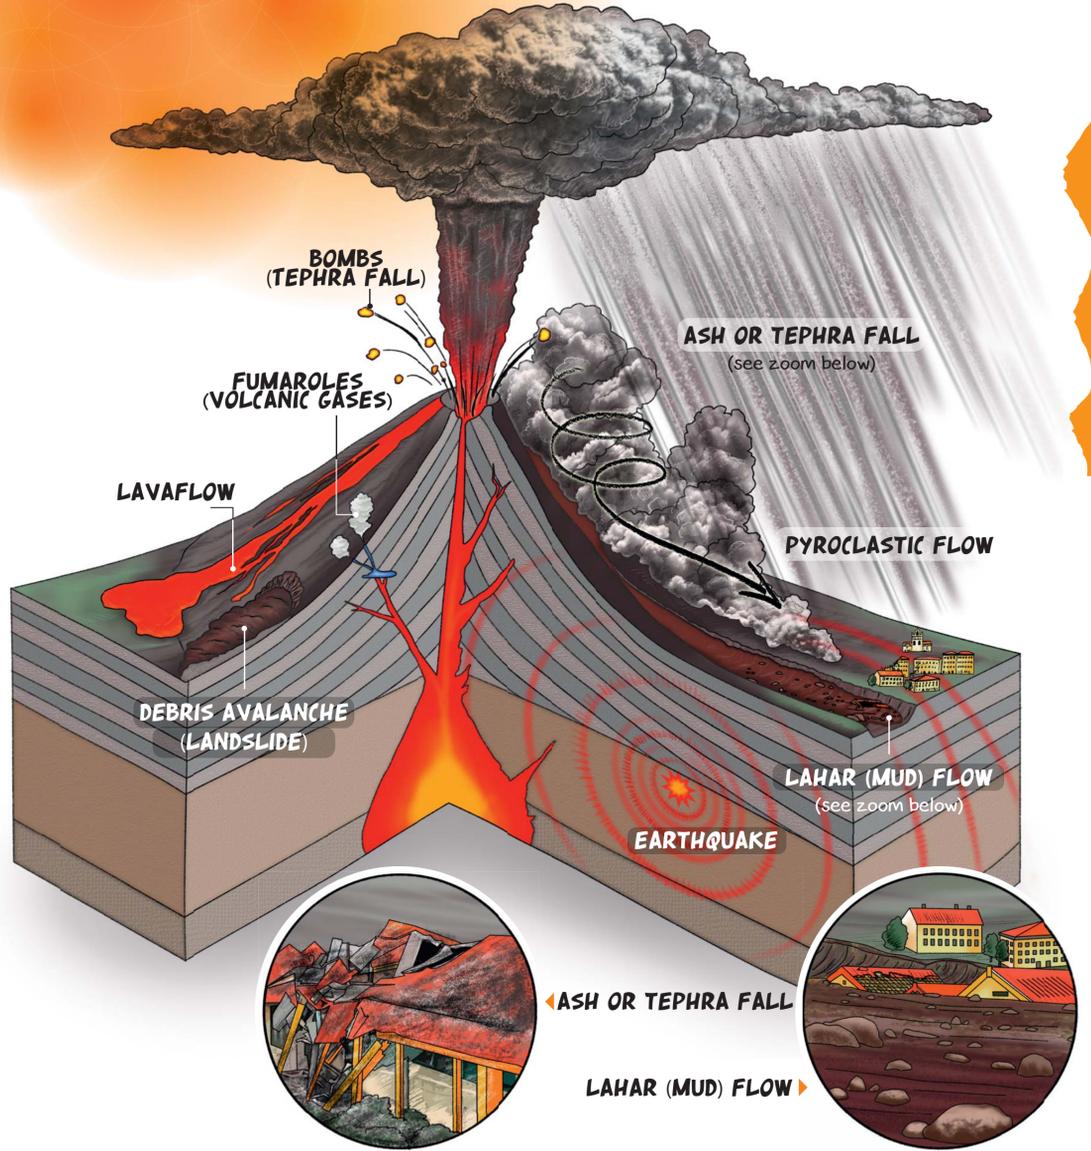

Piton de la Fournaise
SHIELD VOLCANO

Phlegrean fields
CALDERA VOLCANO

AND THEIR RISKS

VOLCANIC HAZARDS

TIMESCALE

Eruptions can last a few hours to several years. Between eruptions, volcanoes can remain quiet for several hundred of years.

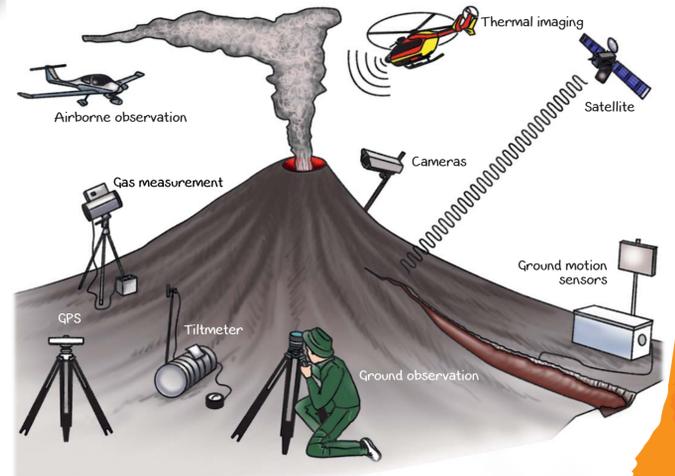

Eruptive history of some volcanoes of interest in the MED-SUV project:

MONITORING

Fortunately, most of the time, monitoring helps us anticipate eruptions and prepare for evacuation. Scientists have several types of monitoring and observation systems available.

IF YOU LIVE IN OR VISIT A VOLCANIC AREA:

Prepare by examining the community's emergency plan, if there is one, together with your family. Contact the mayor's office for details.

For more information, refer to official civil protection information.

A LOOK AT VOLCANO RISK FOR YOUNG STUDENTS.
